OBJECTIVE

Entry-level Full-Stack Developer with hands-on experience building web applications using React, Node.js, Express, REST APIs, and SQL/NoSQL databases. Recent graduate in Information Technology Solutions with strong project and internship experience in frontend UI development and backend API design. Passionate about building scalable, user-friendly applications and continuously learning modern web technologies.

TECHNICAL SKILLS

- Languages : JavaScript, Java, Python, PHP, .NET
- Frontend: HTML5, CSS3, React, React Native, Bootstrap
- Backend: Node.js, Express.js, Spring Boot, RESTful APIs, Flask, FastAPI
- Databases: MongoDB, MySQL, PostgreSQL, Firebase
- Tools/Cloud: Git/GitHub, AWS (basic)
- Concepts: OOP, Data Structures, Agile/Scrum

EXPERIENCE

PopIn - Ontario, Canada

April 2025 – Sep 2025

Full Stack Developer (Co-op)

- Built Python-based web scraping pipelines to collect and process event-related data for analytics.
- Developed the front-end using Expo (React Native) to deliver a responsive and interactive user experience.
- Collaborated with cross-functional teams to integrate APIs and streamline event management features.

Technicra IT Solutions - Ahmedabad, India

Jan 2021 – Sep 2023

- Built responsive web apps using React, JavaScript, and Bootstrap.
- Integrated Firebase and REST APIs for secure data transactions.
- Implemented AI-driven features such as recommendation engines.

EDUATION

Ontario Graduate Certificate – Information Technology Solutions

Jan 2024- August 2025

The Humber College Institute of Technology & Advanced Learning, Toronto

- Relevant Courses: Web Programming & Frameworks, Database Systems, Machine Learning, Big Data, Cloud Computing

Bachelor's in engineering – Computer Engineering

Aug 2018 –July 2021

Gujarat Technological University

- Relevant Courses: Advanced Java, Python , MYSQL, Data Structure and Designating Pattern, Data Algorithms

VOLUNTEER EXPERIENCE

Rise UP (Yogi Divine Society Canada)

Apr2024 - Present

- Developed web applications to support community initiatives.
- Enhanced UI/UX and backend systems using JavaScript and PHP.

PROJECTS

FitFeast – Health & Nutrition Web Application

- Built backend services and APIs to support a BMI and nutrition tracking platform using Next.js, MongoDB, and Node-based services.
- Designed data models for users, meal history, and health metrics with a focus on scalability and maintainability.
- Integrated third-party APIs (USDA FoodData Central, Edamam) to deliver real-time nutritional insights.

Real Estate Listing Platform | MERN Stack

- Developed backend logic for aggregating and analysing large housing datasets.
- Designed ETL workflows and APIs to serve analytics results to visualization tools.
- Focused on performance optimization and clean backend architecture.
